[PaymentCardRepository](#)

[Services](#)

[PaymentCardService](#)

Use Case

- Create payment card using card id and card token
- Get payment card by id
- Delete payment card by id

Models

Payment Card

```
type PaymentCard struct {  
    ID          string    `json:"id" gorm:"primaryKey"`  
    CardToken   string    `json:"card_token"`  
    CreatedAt   time.Time `json:"created_at"`  
}
```

Repositories

PaymentCardRepository

```
type PaymentCardRepository interface {  
    SaveCard(ctx context.Context, card *models.PaymentCard) error  
    DeleteCard(ctx context.Context, cardID string) error  
    GetCard(ctx context.Context, cardID string) (*models.PaymentCard, error)  
}
```

Services

PaymentCardService

```
type PaymentCardService interface {  
    SaveCard(ctx context.Context, cardID, cardToken string) (*models.PaymentCard, error)  
    DeleteCard(ctx context.Context, cardID string) error  
    GetCard(ctx context.Context, cardID string) (*models.PaymentCard, error)  
}
```
